PERSONAL DETAILS

- Date of Birth : 20-12-2002
- Marital Status : Single
- Nationality : South Africa

OBJECTIVE

As a Electrical Engineering student I seek to contribute my technical and analytical skills in Python, Arduino, ESP-32, IOT and electronic assembly to real world projects and forward thinking teams. I am eager to continuously broaden my experience and knowledge, not only in my field but also in diverse areas. I aim to develop practical expertise that sets me apart as outstanding.

EDUCATION

2021	Mampoi High School(Umalusi) Mathematics(80%) and Physical Sciences(83%) 72%
2022	Cape Peninsula University of Technology Diploma in electrical engineering 1st year
2023-2025	Central University of Technology Bachelor's in Electrical Engineering (2nd Year)

SKILLS

- Python
- Packet tracer and IOT
- Skilled in soldering and assembling electronic components
- Familiarity with programming tools like Arduino , ESP-32 and microcontroler PIC

PROJECTS

- **Application Development**
Created a Home Affairs App using Flet with JSON file storage to save, search and modify user information; built an intuitive UI for data entry and retrieval.

Clients: Academic project

Results: Completed in 5 days (ahead of a one-week schedule); delivered a working app with reliable data management and search/modify functionality; minor issues noted.

- **E-Commerce Development**

Built a Pick n Pay Online Store prototype with Flet (frontend) and Flask (backend), using JSON for persistence. Delivered separate Manager and Customer apps supporting account creation, categorized product listings, add-to-cart and checkout flows.

Clients: Academic project / simulated retail use-case.

Results: Completed in 7 days under tight deadlines; produced a functional frontend–backend prototype that lists products by category and supports purchases; operational with some minor issues remaining.

- **IoT Safety Systems**

Developed a Lab Safety Monitor using ESP32, Flask, and Flet. Integrated moisture, heat, and smoke sensors with LED and buzzer alerts. System triggered warnings on unsafe conditions and sent real-time notifications to users' phones.

Clients: academic project.

Completed in 2 weeks, delivered on time; produced a working prototype demonstrating IoT integration, real-time alerts, and improved lab safety awareness.

ACHIEVEMENTS & AWARDS

- IoT Development Fablab, Central University of Technology, Free State Awarded: 07 April 2025 Completed practical training in IoT systems design and development, including microcontrollers, sensors, and real-time data integration.

LANGUAGE

- Sesotho
- English

INTERESTS

- Chess
- Swimming
- Hiking
- Cooking
